Overview:

The quality of the Q-ELEGANT stands it's proof in any type of surrounding area. At the planning of this information terminal, besides the elegant and discrete look, we emphasized the needs of our customers, so there is a possibility to integrate webcam, printer or RFID-reader in our information kiosks. The front side of the Information terminal is fully glass covered, which ensures an extraordinary elegant appearance with the 22" built in TFT screen. The capacitive touch screen guarantees the correct and secure positioning.
